Download "Frag" Enjoy the game! Video: RCRD LRBDR: Thanks! Agricultural workers and livestock keepers are exposed to pesticides on a daily basis. Pesticides can negatively impact an individual's health and well-being, as well as their families' safety, and may not be completely removed from the skin after exposure. To reduce or remove pesticides from the skin, some people apply a thin, transparent film to the skin, referred to herein as a "pesticide residue protection film." For example, one such pesticide residue protection film is the "Skin Safe" product sold by Skin Safe International. This pesticide residue protection film is available in a clear roll with a sticky backing that can be adhered to the skin after use, and a clear overlay peel-off that can be applied to the exposed area to further protect the skin. More traditional pesticide residue protection methods include using a removable patch and/or cotton gloves. Typically, a removable patch is placed on the skin and is covered with a removable protective overlay. Once the pesticide is absorbed by the patch, the protective overlay is removed and discarded. Alternatively, a cotton glove is put on the hand and covered with a protective overlay. Once the pesticide is absorbed by the glove, the overlay is removed and discarded. U.S. Pat. Nos. 6,004,524 and 6,387,099 (both to Pask et al.) disclose, e.g., a disposable pesticide protection device consisting of a spongy backing material having a pesticide-receiving layer adhered to one side of the backing material. The pesticide-receiving layer is removable by hand and is provided with a removable protective layer to prevent contact of the skin with pesticides. U.S. Pat. No. 6,555,223 (Zimmerman) discloses a bandage-type pesticide residue protection device having a pressure-sensitive adhesive layer, a pressure-sensitive adhesive cover sheet and a pesticide-absorbing layer. When the pesticide-absorbing layer is exposed to a pesticide, the pesticides are absorbed by the pesticide-absorbing layer, and the device is then adhered to the skin and covered with a removable protective layer. U.S. Pat. No. 6,566,602 (Zimmerman et al.) discloses a pesticide residue protection device having a body layer and a backing layer. The body layer includes a high 82157476af
