About This Game

N2O: Nitrous Oxide's gameplay is pure shooter, reminiscent of the arcade classic TEMPEST. You're stuck on the perimeter of a tube and your job is to shoot at everything in your way. If things get too hectic, you can slam on the brakes, which stops your forward movement for a few seconds and gives you time to change your direction or clear a path. Once you've destroyed all the level's eggs, your next task is to take on the game's huge bosses. Graphically, the game is very bright and colorful and definitely exhibits a techno influence. The soundtrack is done by the techno group Crystal Method, who supply some remixes as well as older tracks, which helps put you in the groove.

I bought this mostly on a whim. Having seen what Early Access looks like these days, I didn't have high hopes. But honestly, I was very surprised by this one.

Now, as of me writing this, there are some issues;

Firstly, keyboard controls are the only way to go at the moment, but a gamepad would feel more comfortable. I know the developer said they're changing up the gamepad controls, but the fix can't really get here soon enough.

Secondly, enemy variety does leave something to be desired. With every mook with a sword looking the exact same as every other mook with a sword, it does get a bit repetitive.

Third, in english, some of the speech is still... off, though I am aware that the developers of this game are not native english speakers. Some of the speech bubbles do bleed off of the screen, and I suspect they don't do this in the chinese version.

However, the gameplay is solid, the art style is appealing and uniform, the sound design is pretty good, and I'm really digging the soundtrack. There is an entire character customization feature that I was not at all expecting, but it really fits. But the big one... the big one, here...

It's fun! I can really see this game being pretty good, and the only issues I've seen are not all that hard to fix.

And, it's an Early Access title that has content, feels like it has been developed before they started asking for money, AND it actually works.. бля, чуть не абасрался. OLDIES BUT GOLDIES :)

The game offers you a trading simulator that has well prepared artificial intelligence. It combined strategy and city-building games with trading goals. On the other hand, I suggest the game for business administration freshman students:)

Graphics are very low but actually, it makes me excited because you can feel a 2000's again.

To conclude the game is worth trying, after all its size just 700 MB

NOTE: there is a possibility of error for the first start of the game.(S2.exe) You should click all test button and then accept to all process.. suram nih game , apan apan coba bikin emosi pff ..

rekomendasi buat yang ga pernah emosi main game. but wait, ga pernah emosi ? imposibruu coey. Good game. Worth up to \$25.. As much as I really want to support them for getting Linux support in, the performance just isn't acceptable.

So I just got out of my first session. Overall gameplay is good. There was a slight bit of confusion in the tutorial for me as I bought something it didn't want me to and then I had no more money....but after that the rest is very much what I expect from a turret defense game.

- There is a predefined path from start to finish(like balloon turret defense).
- You place your towers, by placing or throwing them to the ground.
- You can resize yourself by using the grip buttons
- motion is by "dragging" the world around, no teleport, no tracks
- all turrets are upgradeable, some multiple times.

Only current gripe is the small number of starting towers. There are 4 starting towers: laser, cannon, scatter shot, and a buffing tower that increases the effectiveness of the others near it.

There are two more empty slots with no tower in it, so I'm sure more towers are on the way.

Probably the purest turret defense game I've played in vr so far.

Oh and if you like my wife and don't care for the music, you can turn it off in game and still have other sounds.. I enjoyed this game a lot - mansion/castle settings make for my favorite Nancy Drew titles, and this early offering was no exception. Despite the fact that there was no checklist and a VERY limited diary, I didn't find myself getting lost all the time like I thought I would - and there is still a very helpful phone-a-friend hint system. I actually didn't get through one dang slider puzzle, but I could already figure out where the story was headed anyway, so maybe I will go back and try to finish it again one day. I wouldn't recommend this to newer players, but more experienced and loyal ones will find it to be great fun - especially if you are less leery of slider puzzles than I am :P. Okay so this game basically has a long way to come before it gets any worth playing. It is very early to determine if this game should be charging money to be played as it is basically not a complete or 1.0 version game. Things the game lacks:

A proper introduction

A proper tutorial (when I mean proper I actually mean it)

Advice and prompts ingame to help progress (sometimes I have no clue of what to do)

Things like the drill and farm should have animations to prove they're working (i maybe didnt get them to work if thats the case lol)

incomplete and will be edited as I further understand the game. Great gameplay and great soundtrack!. Please fix the multiplayer mode, i just buy this game to play with friend !

but the multiplayer is error. Shu is an excellent looking game with a unique art style. A lot of original gameplay mechanics will keep on freshening up your experience throughout a big variety of levels with different landscapes/looks.

The game runs very smooth and gives the more competitive players a chance to compete on time based highscore leaderboards.

I would personally recommend playing Shu with a controller, as the keyboard controls can feel a bit clunky at times.. Awesome game that feels like the real thing (without having to deal with weather diverts and whiny pilots). My only request for future releases is to have the tower camera automatically change view to an impending crash. All too often, I'm landing planes looking in one direction and the accident that ends my session happened at the other end of the runway, and I ALWAYS miss seeing it. At least if the camera pans to that direction I'll know what happened and why I have to start over. Don't get me wrong, I don't need enough time to change something to try to prevent the accident, I just want a second or two to understand what happened.. after i bought the escalation and animation pack, whenever i start up any of the zombie maps the game crashes. need some help. I have already re-installed the game. it said that bash 423 was responsible.. help!. Seems like it should be a good game, but the online community is dead and it's a multiplayer game so there's no point in buying it.

. a nice relaxing game. i like it. nice music. i like the eat sound lol and i just like the music. 9.5/10
